

Korean Patent Application No. 98-14276

The English translation of the Abstract :

The present invention relates to a power control method on a reverse link common channel in a CDMA communication system. The power control method comprises the steps of performing an initial power control by transmitting a power control signal to the mobile station from the point of time that a predetermined signal is detected, not a message received from a mobile station on the reverse link common channel, and upon completion of the intial power control, transmitting the message from the mobile station to the base station via the common channel of the reverse link while the power control becomes maintained by the base station.
